

Berlinda Anaman, PMP

Product Manager · Technical Project Manager

Accra, Ghana · open to fully remote roles · Available with 3 weeks' notice
berlana.d@gmail.com · +233 54 533 9870 · linkedin.com/in/berlinda-anaman · berlindaanaman.com

PMP-certified product and technical project manager who turns complex ideas into clear, testable, launch-ready digital products. I work across regulated fintech, healthtech, SaaS and mobility, from discovery and requirements through vendor integration, QA and launch. A mathematics and data background means I can talk APIs and architecture with engineers and give founders and regulators plain-language updates.

15 products delivered or coordinated across six sectors	60+ backlog items across 10 workstreams for a regulated exchange	5 person cross-functional team led for 2+ years	12 hrs per week saved through automated reporting

EXPERIENCE

Project Manager — Hyro Exchange Company Ltd, Accra

Jul 2026 – Present

Ghanaian digital-asset exchange in development inside the Ghana SEC regulatory sandbox (pre-launch).

- Set up the delivery foundation from scratch: MVP scope, phased roadmap, governance, an AI-assisted Jira/Confluence/Slack workflow and a 60+ item backlog across 10 workstreams, including KYC, payments, on/off-ramp, settlement, authentication and integrations.
- Led technical review of the external vendor's MVP proposal (stack, authentication, on/off-ramp, spot trading, swaps and deployment), challenged scope that fell short, and moved production deployment from Vercel to AWS.
- Ran the identity-verification dependency: onboarding with Ghana's National Identification Authority, selecting remote facial verification, and handing the API into the sprint. The backend integration is now in testing.
- Took over a stalled Data Protection registration and carried it from application to provisional certificate.
- Wrote the compliance module requirements, covering KYC tiers, customer risk assessment, AML monitoring, alert and escalation workflows, and audit trails.

Product & Technical Project Manager — Annologic LLC, Accra

Nov 2023 – Present

Technology delivery firm serving local and international clients across software, AI and Web3.

- Product manager for Lepta QA (live SaaS), Lepta Studio (live SaaS) and Doctorevs (healthtech, in beta testing); project manager across client and in-house products.
- Introduced Definition of Ready/Done and regular sprint and reporting cadences, so projects closed complete and with far less carry-over.
- Line-managed a cross-functional team of five for 2+ years, covering hiring, onboarding, 1:1s and performance input, and cleared delivery blockers within 24 hours.
- Kept a DeFi yield-farming MVP on track through a Hyperliquid-to-Solana pivot, with a formal change log and coordinated backend, frontend and DeFi specialists.
- Requirements and demo lead for an AI document-verification POC for the Ghana Investment Promotion Centre, including layered forgery checks, realistic test data and the stakeholder demo.
- Coordinated delivery of the Byond iOS app (live on the App Store), the Cerebrum decentralised GPU network, and client e-commerce and Web3 websites.

Business Intelligence Analyst — Dataware Tech Ghana Ltd, Accra / Remote

Nov 2022 – Aug 2023

- Built four Power BI dashboards and loan-risk models for senior stakeholders, and automated weekly reporting, saving the operations team about 12 hours a week.
- Mapped a financial client's manual workflow into a Power BI data pipeline and led the solution presentation.

Lead Generator — Absa Bank Ghana Ltd, Tema

Nov 2020 – Apr 2021

- Managed retail client relationships, contributing to a 20% increase in lead conversion and 90% customer satisfaction.
